Subject: My Alaska natural Resources and yours too!

When I look at the Alaskan constitution-- I realize how fortunate I am to have rights and that as an ALASKAN I actually OWN the incredible resources of this state,, the fish the minerals, the trees... the animals.... With said ownership I also realize, I have the have the RESPONSIBILITY to protect these resources, to use them well, and to use them wisely, AND to protect their sustainability-- so that all future generations-- future Alaskans-- will have these resources and rights and responsibilities as well. How fortunate I am. How HUGE is this responsibility!.

Then the dark cloud surrounding fracking operations looms overhead, and I realize, it is my DUTY to respectfully ask that AOGCC sets up stronger Fracking RULES. If we cant stop fracking in this state, as they have done in France and some states, we must at LEAST ensure the highest protections available, to any fracking that will take place, and all fracking plans/sites must be fully disclosed to each and every citizen of the state, so that if this is to occur, people have the right to KNOW about it and the hazards that are coming their way, and can choose how to deal with it. Fracking fluids contain toxic constituents that is for sure. Their have been NUMEROUS hazardous spills and wastes generated so far by fracking industry in both the US and CANADA already. Their can be no trade secret type exemptions for instance, allowing frackers not to disclose where they plan to frack, nor what fluids would be used. As an Alaskan I deserve to have full disclosure surrounding it all. And he opportunity to secure my water tights prior to any fracking operation. All groundwaters within a half mile of any fracturing operations need before and after water monitoring. These are just a few of the requirements that must be met! Our resources are MORE valuable than the amount of oil they will get out of the ground, and I believe water will be worth more than oil very soon. Please AOGCC, hear my plea, and help me take care of the vast resources in this state, not simply sell out the fracked hydrocarbons they may find that me may have available. Any supply they get, is not for my use, it goes into the public trading--even the oil they may get from fracking is NOT for me, the Alaskan who owns these resources.

Sincerely, Amy Christiansen RN Homer ALASKA.

67560 Walter Thomas Rd
Homer, Alaska 99603

I would like a response --email, or snail mail, or some sort of communication from you that this letter was received and read and my concerns heard.
